

HL7-DK HACKATHON 2026

TRACK 3

**YOUR HEALTH, YOUR DATA — BUILDING THE PERSONAL
HEALTH DATASPACE**

JACOB ANDERSEN

JACOB.ANDERSEN@ALEXANDRA.DK

Sammen kommer vi #foran**digitalt**

Agenda

- **Welcome**
 - Presentation
 - Goals of today's session
- Track Scope & Motivation
 - Recap of the website and last week's webinar
 - Developments since the webinar
- Groups and Components
- Synthesis — what we aim to build?
- Homework and Logistics before Hackathon Day
- Last Questions / AOB

 - Recap of the website and last week's webinar
 - Developments since the webinar
- Groups and Components
- Synthesis — what we aim to build?
- Homework and Logistics before Hackathon Day
- Last Questions / AOB

Goals of Today's Session

- Refresh the shared motivation and use case
- Current infrastructure status
- Hear from participants who already have chosen a topic
- Mutual inspiration – start shaping the puzzle pieces we'll assemble in collaboration at the hackathon
- Ensure all participants have a topic / clear idea on what to work towards
- Leave with homework / a plan for the preparations
- Ensure Hackathon Day will be a lot of FUN!

- Last Questions / AOB

Track 3: Your Health, Your Data

- Building the Personal Health Dataspace

Track lead: Jacob Andersen

5.1 Overview

Imagine a health system where the citizen is at the centre — where data follows the person, and where every individual has real control over what is shared, with whom, and for how long.

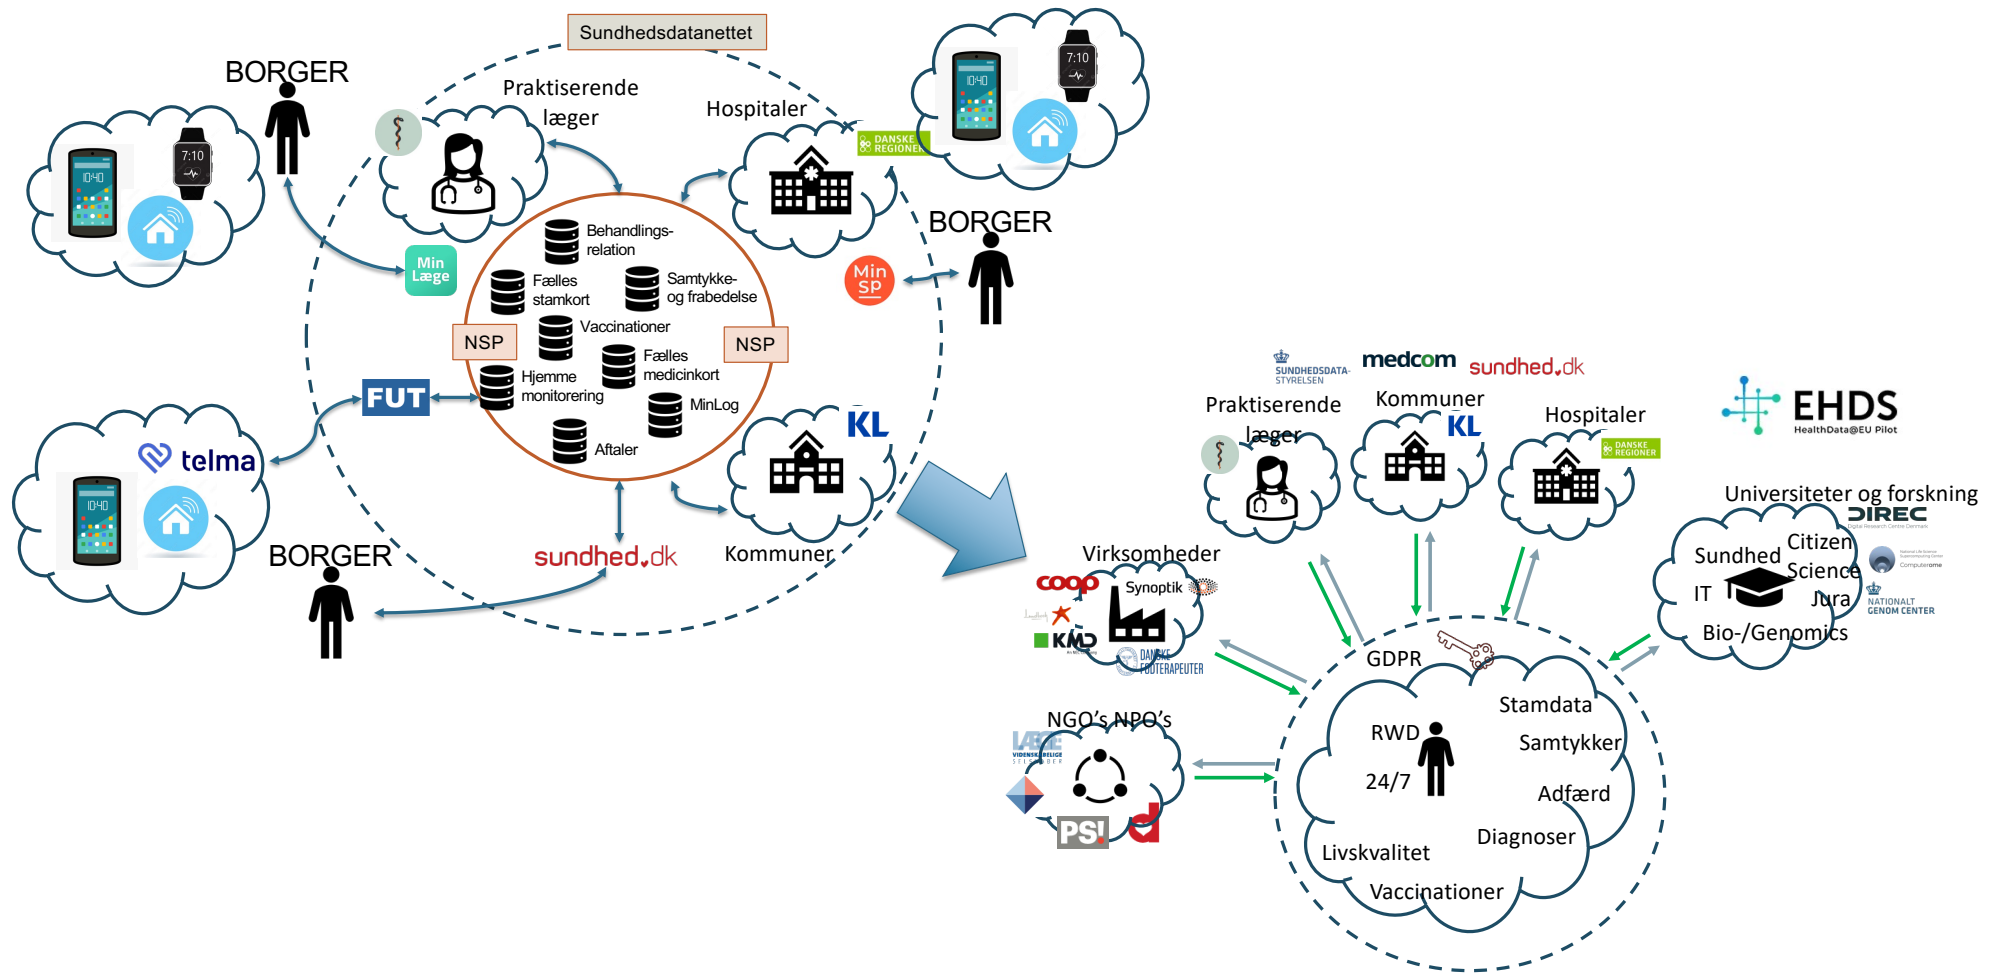

That future is now encoded in law. The European Health Data Space (EHDS), in force since March 2025, grants every EU citizen the right to access, download, and share their personal electronic health data. It also creates a legal framework for citizens to contribute their data — including patient-generated data (PGHD) from wearables and apps — to research under transparent, revocable consent. The standards are converging. The regulation is in force. What does that actually look like, built in FHIR, running today?

This track invites participants to explore that question by building components of a **personal health dataspace**: an ecosystem where a citizen's health data — whether sourced from a hospital EHR, a fitness tracker, a blood glucose monitor, or an environmental sensor — can be stored, shared, and optionally donated to research, all under the citizen's own control.

There is no single prescribed task. Participants are free to build whatever component they find most interesting or meaningful. We do, however, encourage participants to communicate their intentions ahead of the hackathon so that components built on the day can potentially be demonstrated together.

Motivation

Example: User Story

By courtesy of Giulia Baldini

Anne Sørensen
41 years old

CPR (DK)

KVNR (DE)

- Lives in Flensburg, Germany
- Works in Sønderborg, Denmark
- Just moved to Germany after being in Denmark all her life

Danish Record

Diagnoses

- Hypertension (DI109)
- Diabetes type 2 (DE119)

SKS (Danish ICD-10)

Medications

- Ramipril 5 mg (C09AA05)
- Metformin 1000 mg (A10BA02)
- Atorvastatin 40 mg (C10AA05)

Fælles Medicinkort, coded ATC

German Record

No record yet.

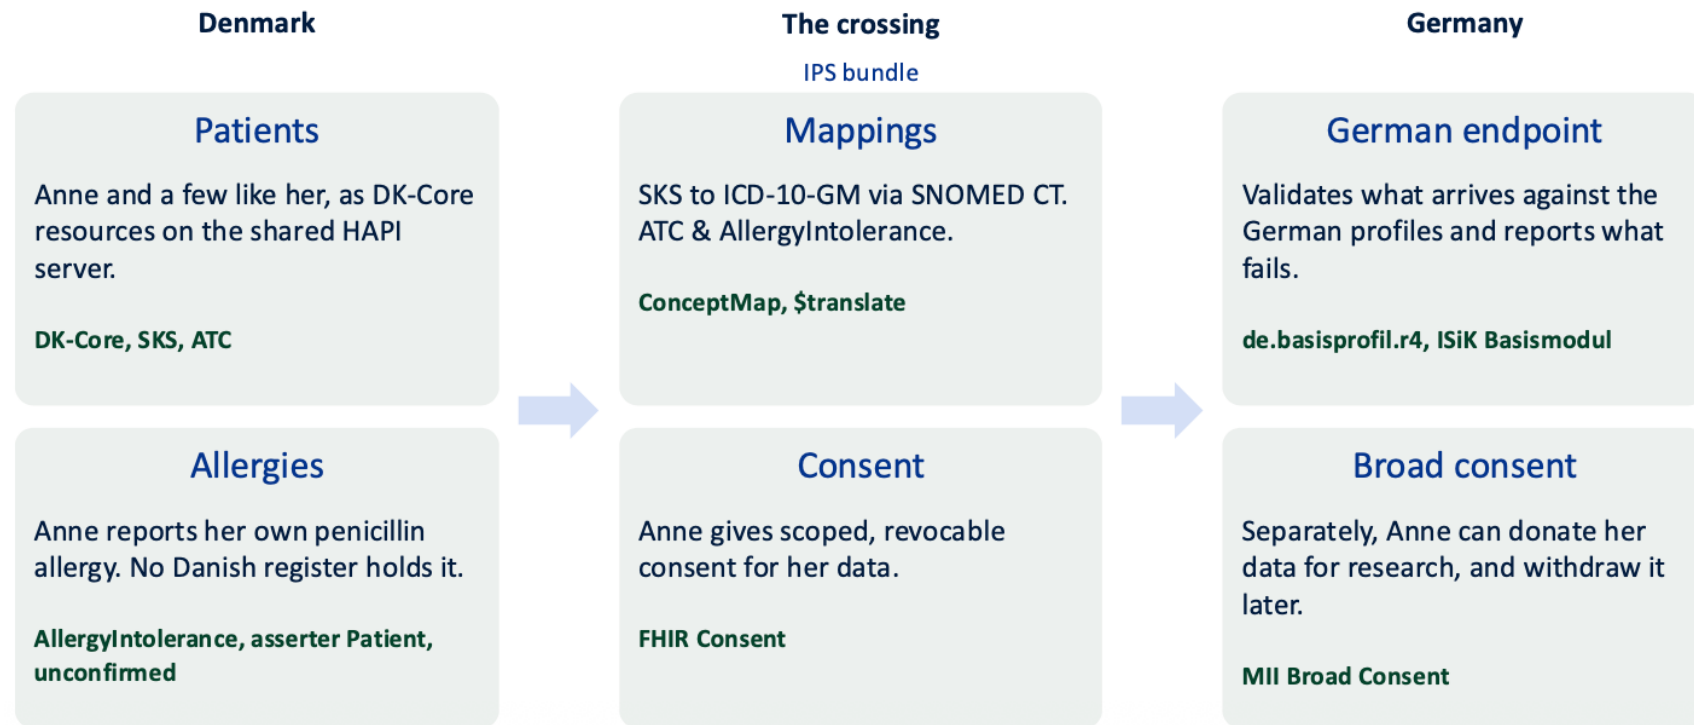

Anne registers with a new GP in Flensburg. How does her record come with her?

Component Ideas

1. **Data Sources: Getting data into the PHR**
 - Import data from external (FHIR or non-FHIR) data sources into the personal data space
2. **PHR Core: Structuring and validating the dataspace**
 - Data models for the personal data space – focus on the CONTENT (and FHIR profiling)
3. **Identity, Sharing & Consent: Controlling the dataspace**
 - Data exchange and the control plane – focus is on the EXCHANGE and CONTROL
4. **Secondary Use: Donating data for research**
 - Export data to external (FHIR) data sinks from the personal data space

 - **Developments since the webinar**
- Groups and Components
- Synthesis — what we aim to build?
- Homework and Logistics before Hackathon Day
- Last Questions / AOB

Shared Infrastructure Pieces

- Before the hackathon starts we intend to set up 3-4 FHIR server endpoints. Entrypoints will be listed at this site: <https://hl7-your-health.projects.alexandrainst.dk/>
 1. Anne's existing Danish GP's practice system (preloaded with Anne's details using [IPA-]DK-core profiles)
 2. Anne's new German GP's practice system (initially empty except a Practitioner). Profiles TBD.
 3. Anne's PHR (nation-agnostic profiles, can be used as both source and sink, probably preloaded with something)
 4. Extra – may be used to cover alternative scenarios, e.g. donating data for research or sharing with a private doctor
- Anne has been created at the MitID and NemLogin test environments
- Anne has been created as citizen in the FUT test backend and has been assigned a CarePlan that requests her to measure her blood pressure at home

The screenshot shows a login page for 'FUT education - devenvcgi (test)'. It features the MitID logo in the top right. Below the header, there is a 'USER ID' label with a help icon. A text input field contains 'Asorensen' and has a 'Hide' button to its right. A blue 'CONTINUE' button with a right arrow is positioned below the input field. At the bottom, there is a link with an information icon and the text 'Lost user ID?'.

Log on at FUT education - devenvcgi (test)

- Last Questions / AOB

Between now and October 6th

- This week' homework for all groups
 - Briefly describe their intended component on the [FHIR Zulip #nordics channel](#) or PM to me – I still need to hear from some...
 - Development tools, access to systems etc.
 - Follow the infrastructure development at <https://hl7-your-health.projects.alexandrainst.dk/>
 - YMMV
- October 6th
 - Hack 🔥 — hopefully resulting in one or more of the following:
 - A working or partially working prototype component, with source code in a public repository (GitHub or similar)
 - A FHIR resource or Bundle that validates against the relevant IG and can be POSTed to the shared server
 - A short write-up (README or a few slides) describing what was made, and any gaps or surprises encountered in the standards
 - Connectathon 🔥🧑🔥
